Insert the keygen and run the Autocad file. There are new options available for you to set Autocad to. First, you need to set the options by using the Edit Options button on the top right of the screen. You have the option to select a new template. You can set the template size, resolution, resolution style and texture size. Next, you have the option to set the offsets or how far the picture should be offset from the CAD file, the color adjustment for smooth shading and new preferences for the look and feel. Select whether you need to check the grid on a new layer, and the current layer. The window will now open with the new options for you to set. Select the following: * Grid on top and bottom (check). * Check this option to have a new transparent grid appear. * Use the grid to set the grid size. * Set this to the same as the template. * Auto align to objects (on). * Set the auto align to objects. * Object-aware fit. * Fit (on). * Stretch to fit. * Uniform mesh (on). * Uniform mesh (on). * Mesh on object. * Settings window on top. * Check the settings window. * Select the settings window. * To select a layer, click the layer you want to use. * To select the layer name, click the layer name. * Select the first layer. * Select the last layer. * Press the button to close the window. Setting up a baseline When you go to build a component in Autodesk Autocad, you must first set the option to build the component on a baseline or a reference plane. The easiest way to set up a baseline or a reference plane is by using the AutoBaseline tool. This tool creates a reference plane that you can use as a baseline for the component. If you are trying to set up a baseline for a component, you may have to start with the option to "Add a baseline." Setting up a baseline for a component After you have opened the options of a component, the first option you can set is to add a baseline. To set a baseline for a component, click on the button on the top right of the screen.
