A Visual Basic add-in is a class library that contains various functions that allow an application to run on Windows, and it can be made into a form to provide a user interface. A Visual C++ add-in is created with the Microsoft Visual Studio 2005 or 2008 IDE. When creating an add-in for a program or application that does not have an interface, a user can use Visual Studio to create the add-in, then save it as a Visual Studio project file. This file can then be imported by the IDE and the add-in created for the target application. A Visual C# add-in is created with the .NET Framework 4.0.
