A: This is a version number checker I wrote using a regex expression to find specific version number strings in a source string. It doesn't rely on any external libraries, and should work on any version of Windows or Linux. Version number format: String must start with the letter (between A-Z) of the version number. Current version can be found after the letter (between A-Z). Future version can be found after a hyphen (between 0-9). Example: 4.0.1.4, Version 5.0.1.5, Version 6.0.0.0 Pattern: {Version:((?:[A-Z].*\))?Version\s*:\s*((?:[0-9]*\.)+)(.*)}, Code: Version number checker verCheck.js document.addEventListener('DOMContentLoaded', function() { var verNum = document.getElementById('verNum'); var input = '1.5.0.0'; var checkResult = document.getElementById('checkResult'); var pattern = '{Version:((?:[A-Z].*\))?Version\s*:\s*((?:[0-9]*\.)+)(.*)},'; var ver = input.match(new RegExp(pattern, 'i')); if (ver == null) { checkResult.innerHTML = 'String not matched'; } else { checkResult.innerHTML = 'String matched:'+ ver; } } 3da54e8ca3
