Compression utility 7.2.2.0 High performance compression utility with multi-threaded compression support. High speed compression of files with standard DEFLATE or GZIP algorithms. Support for various compression levels from 0 to 9. The default is 5. Limitations: Does not support multiple compression algorithms. You can use either DEFLATE or GZIP, but not both at the same time. Does not support additional compression methods. Uncompression speed is limited by CPU speed. If you do not

specify the number of threads, it will use the default number, which is limited by the system, and this number may be far less than your available cores. Does not support file updates, including the database. Compression is a purely read only process. Note for PLCAD users: If you have installed PLCAD 4.4, you cannot open PLCAD 4.6 files with PLCAD 4.4. The default configuration of the compression database can be used with PLCAD 4.6.

Q: Can any java object or class be a parameter of a generic method? I have a method: `void doSomething(List list, Class c) { // do something with list }` and I would like to do something like this: `List o =...; doSomething(o, Object.class);` but this doesn't work because: `java.lang.ClassCastException: java.util.ArrayList cannot be cast to java.lang.Object` Is there any way to do it? A: You can't do it with generics; but you can do it with some reflection:

```
import java.lang.reflect.ParameterizedType; import
java.lang.reflect.Type; import java.lang.reflect.TypeVariable; import
java.lang.reflect.WildcardType; import javax.lang.model.type.DeclaredType; import
javax.lang.model.type.TypeKind; class DoSomething { void doSomething(Class c) { if (c
== Object.class) { throw new AssertionError(); } Class containerType =
c.getComponentType(); Class[] types = {}; Type[] args = {};
doSomething(containerType, types
```
