AutoCAD Crack With Serial Key X64 [Updated] 2022

What's so great about AutoCAD, besides its attractive price tag, is that it can draw "freehand". So, when you're viewing your drawing and you see a dashed line or a dotted line that should be the same width as a line that isn't dashed or dotted, you know where to look, and you're in the driver's seat. In our last edition, we'll see how you can use AutoCAD's Sketch Tools to draw a dotted line or dashed line. **Step 1: Open an AutoCAD Drawing** Open a new drawing, or open an existing drawing for editing. To open an existing drawing, right-click anywhere in the drawing area to bring up the context menu. From the left side of the menu, select Open, and navigate to the file location. In this example, we've opened the Southdown Assoc.'s Civic Centre folder to display the Southdown Civic Centre AutoCAD drawing. The default name for a new drawing is Drawing1. This is a good starting point to set the file name. If you name the new drawing something different, AutoCAD will use the new name as the default, if you make any changes to the drawing. If the drawing already has a name, double-click the file's name to open it. **Step 2: Draw a Simple Line** Start a new drawing by clicking anywhere in the drawing area. Right-click to open the context menu, and select Tools. From the drop-down menu, select Drawing Utilities. The Drawing Utilities Toolbar opens. From the Drawing Utilities Toolbar, select Line. This opens the Line dialog box, where you can draw a line. In the Line dialog box, enter a line's starting point and ending point, and click OK. A line is drawn from the starting point to the ending point. You can use any type of line. From the line selection options, select the Type of line. Autodesk's default line is dashed, or dotted. You can also enter the line's thickness, which is the distance between the line's nodes. The distance is measured from the node closest to you to the next node closest to you. You can enter the distance in the Measurements text box. In this example, we've drawn a line using the dash-dotted line type. The starting point is in the upper-left corner
