It is a vigorous, disease-resistant cultivar that does well in a garden. It is a popular rootstock on which hybrid cherry trees are grafted. Several different combinations of cherries and rootstocks have been developed, allowing varieties of trees to be made that would not be possible from the original species. Some chokecherry varieties are grown as ornamental trees in the landscape, including 'Yageo', 'Golden Glow', 'Little Duke', and 'Northwind'. Some produce excellent fruit, while others have been found to be prone to canker. Chokecherries are used as landscape trees in parts of the United States, Europe, and Latin America.
