Generate PDF documents or create PDF envelopes from any data in any application. Create PDF documents easily and quickly using your application interface. PDF Converter is supported in the most popular development environments: Delphi, VCL, .NET, WinAPI, and VB.NET. PDF Converter uses a Java-like object structure. You can change the names of files, folders, and registry entries through the object structure. The names are mapped to the

actual filename in the application. PDF Converter simplifies the process of creating PDF documents, allowing you to reduce the time it takes to generate PDF documents and communicate with your users. The professional version of PDF Converter includes various additional components.

FEATURES:

- Create a new PDF document with your own graphics
- Support for programming languages Delphi, VCL, .NET, WinAPI, and VB.NET
- Support for Internet

Explorer, Google Chrome, Mozilla Firefox and Opera

- Support for Windows Media Player, Quicktime, and Windows Media Streaming (Live)
- Add to your application with our own library object structure
- Create a new PDF document with any data in your application
- PDF Converter handles complex special characters and symbols correctly
- Create PDF files with the most popular page layouts, such as A4, Letter, Tabloid and 21x14 inches
- Use our application as a PDF printer

using our special library

- Support for PDF font formatting with TPDFFont from PDF Converter Inc.
- Add and protect your application by our licensing system PDF Converter - Developer Edition is a special version of our software that allows you to add a few new features and modify the programs interface. For example PDF Creator can be used as an envelope creator, and PDF Converter - Developer Edition comes with special calibration tools. Because this edition is for developer you can

use the trial period without any limitations. PDF Converter - Developer Edition Description: Creates a PDF document from any data in your application Convert any data from your application to a PDF document using the printer (PDF Converter). PDF Converter is completely Java based, allowing you to use any types of file or data without extra dependencies You can use your application as a PDF printer (for example you can design a PDF document for your application with a PDF designer). Create

complex PDF files, combine several PDF documents into one file, and many more. Use PDF Converter in your application to create PDF

PDF Converter - Developer Pro Crack X64
