To investigate the clinical and pathological features, preoperative imaging characteristics, and outcomes of children with a solid-cystic renal mass (SCRM) on cross-sectional imaging who undergo surgical resection. Retrospective review of all children who underwent resection of SCRM at two tertiary children's hospitals. A total of 42 patients were identified. The children were on average 9.9 ± 3.7 years of age (range 3.6-17.9), and 68.6% were male. The median tumor size was 4.5 (range 1.
