A: Try this: Text The present invention relates generally to semiconductor processing, and more particularly, to a method of fabrication of a self-aligned gate for a transistor. As semiconductor device dimensions decrease, gate critical dimension control and alignment becomes increasingly important. In addition, gate capacitance for a given gate height is an important consideration. The critical dimension control and alignment are critical in both the formation and patterning of gate materials, while gate capacitance is a key determiner of circuit design speeds. However, as design rule sizes are reduced to accommodate smaller dimensions, a gate capac c6a93da74d
